CRR102X CORAL REEFS: DATA AND MONITORING

A free online course developed by the University of Queensland.

The course is designed to build practical monitoring knowledge and support practitioners, community members and decision-makers who use coral reef data to inform conservation, management, and policy decisions.

Content Covered:

The course focuses on strengthening the full monitoring cycle - from defining clear objectives, to selecting appropriate methods, collecting and analysing data, and communicating findings in ways that support informed decision-making. Learners will

KEY FEATURES OF THE COURSE:

- Practical learning that encourages application to your own context
- Global classroom discussion forums encouraging collaboration and sharing of knowledge
- Course materials offered in English and Indonesian, with French to come early 2026
- Free enrolment and Certificate of Completion available

engage with applied examples and realistic scenarios that reflect the complex environmental and social contexts in which reef monitoring takes place.

FOR ANYONE INTERESTED IN INTEGRATING SCIENTIFIC AND TRADITIONAL KNOWLEDGE TO DESIGN, INTERPRET, AND COMMUNICATE EFFECTIVE CORAL REEF MONITORING.

SUGGESTED:

1-2 HOURS PER WEEK FOR
5 WEEKS, OR SELF-PACED

About the project

The GEF7 Coral Reef Rescue project is a multistakeholder project implemented through the World Wildlife Fund (WWF GEF Agency).

Designed for real-world impact, our courses equip you with adaptable strategies and tools for diverse contexts. With a strong focus on peer-to-peer knowledge sharing, each course evolves to meet the needs of its audience.
