CRR101X CORAL REEFS: INTRODUCTION TO CHALLENGES AND SOLUTIONS

A free online courses developed by the University of Queensland

This course is an introduction to the science, human interactions, threats and conservation of Tropical Coral Reef Ecosystems. Learners are invited to apply their learning to their own context throughout, and to interact and share with other learners from across the planet.

Content Covered:

The course begins by exploring the diverse and interconnected life in tropical coral reef ecosystems. It then covers how humans interact with, and in some ways threaten, this ecosystem balance. With data and information collected from satellites and communities

KEY FEATURES OF THE COURSE:

- Practical learning that encourages application to your own context
- Global classroom discussion forums encouraging collaboration and sharing of knowledge
- Course materials offered in English and Indonesian - with more languages to come
- Free enrolment and Certificate of Completion available

forming a picture of reef health, the course concludes with an overview on how to use information and approach solutions.

FOR ANYONE WHO WANTS TO BETTER UNDERSTAND
THE THREATS FACED BY CORAL REEFS AND
SOLUTIONS FOR THEIR CONSERVATION

SUGGESTED:
 **1-2 HOURS PER WEEK FOR
7 WEEKS, OR SELF-PACED**

About the project

The GEF7 Coral Reef Rescue project is a multistakeholder project implemented through the World Wildlife Fund (WWF GEF Agency).

Designed for real-world impact, our courses equip you with adaptable strategies and tools for diverse contexts. With a strong focus on peer-to-peer knowledge sharing, each course evolves to meet the needs of its audience.
